High Shock Turbine Flow Meters

Description

Flow Technology's High Shock turbine flow meters utilize a proven flow measurement technology to provide exceptionally reliable digital outputs. Because of their versatility, these flowmeters are the solution for a wide variety of liquid flow sensing applications.

The High Shock flow meter is specifically designed to withstand pressure spikes that create hydraulic shock waves in the fluid when actuators or rams are activated. The downstream end of the meter's housing has a small step, rather than a retaining ring, which prevents internal components from being pushed through by hydraulic shock. The upstream end of the housing includes either a Truark® retaining ring, or in extreme cases, a threaded retaining ring which is screwed into the housing, clamping the internals between the downstream step and the retaining ring. Additionally, the meter's supports are mechanically locked in place so they cannot rotate in the housing.

The High Shock flow meter's rotor blades are thicker than those found on a standard turbine meter. A radius is machined at the intersection of the blades and rotor hub, eliminating the stress point created by a 90-degree cut. In hydraulic fluid applications requiring the use of ball bearings, a step is located in the upstream bore of the rotor so it cannot be pushed over the bearing.

High Shock meters are available in sizes from 3/8-inch to 2-1/2 inches, and are capable of measuring liquid flow rates from 0.03 to 450 GPM (0.1 to 1,700 LPM). The meters' standard range is 10:1, but can be extended to 100:1.

Operation

A volumetric device that measures the flow of liquids, the turbine flowmeter's design is based on a freelysuspended turbine rotor which is rotated by the flow of fluid through the meter body.

HS Series Turbine Flowmeters

Applications

Flow Technology's High Shock turbine flowmeters are a rugged flow measurement instrument designed for use in environments with high line pressures, hydraulic shock loads and other extreme conditions. The meter incorporates unique features making it well-suited for use in such applications as hydraulic R&D, production testing, and control of rams and valves in the petroleum industry.

Features

- Designed for environments with high line pressures and hydraulic shock loads
- Utilizes special, reinforced rotor blades
- · High turndown capability, up to 100:1
- Excellent speed of response
- Repeatability of ≤ ±0.05%
- Linearity of ≤ ±0.05% of reading over normal 10:1 range for liquid
- Operating pressure determined by end fitting selected
- Liquid flow rates from 0.03 to 450 GPM (0.1 to 1,700 LPM)
- Choice of NPT, MS, SAE 4-Bolt, Autoclave, and Dynamic Beam Seal end fittings
- Additional end fittings available as special configurations

Performance Specifications

Performance specifications are based on a viscosity of 1.2 centistokes using ball bearings.

Calibration Accuracy

≤ ±0.05% of reading (accuracy of primary flow calibration standard directly traceable to NIST)

Repeatability

≤ ±0.05% of reading

Linearity

 $\leq \pm 0.5\%$ of reading over the normal 10:1 flow

range

Pressure Drop

±0.1% of reading with linearizing electronics

Less than 700 mBAR (10 psid) at maximum 10:1 flow range

Dynamic Response

Less than 10 mS response to a step input change of flow rate

Specifications are for reference only and are subject to change without notice.

Specifications

Materials of Construction

Standard 316 SST Housing

430F SST Rotor 440 C Ball Bearings

Temperature Limits:

Stainless steel all other wetted parts

Operating Temperature Range

Defined by pickoff and bearing selection

Bearing Type

440 C stainless steel

-450° F to +300° F (-270° C to +150° C)

Note: Not recommended for water service.

Tungsten carbide

journal bearings -100° F to +1,200° F (-75° C to +650° C)

Pickoff Type Temperature Limits:

-430° F to +350° F (-260° C to +177° C)

Output: 10 mV min.

High Temp. Magnetic -430° F to $+750^{\circ}$ F (-260° C to $+400^{\circ}$ C)

Output: 10 mV min.

Modulated Carrier (RF) -300° F to +350° F (-185° C to +177° C)

High Temp. (RF) Up to 750° F (400° C)

Pickoff Electronic Connections

MS Connector

2-pin, standard pickoff: 15-89515-1013-pin, amplified pickoff: 15-89515-1024-pin, pickoff with RTD: 15-93825-01

Threaded Connection

with Leads

Junction Box with Terminal: 73-31836-105

Operating Pressure Range

Filtration Recommendations

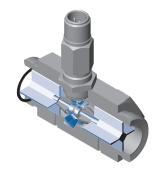

Ball Bearings 10 micron to 100 micron (with

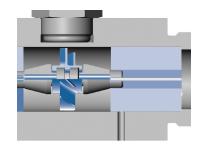

less filtration for large sizes)

Defined by end connection

Journal Bearings 100 micron
