

EL 2200

Electromagnetic Flow Meter

Description

The EL 2200 series of electromagnetic sensors represent the state of the art for the accurate measurement for water cycle and process applications. Flow meters are available in line sizes from 1" through 16". This new generation sensor incorporates improvements to the signal protection as well as the magnetic distribution elements to create a unique electromagnetic field profile that ensures accuracy not only in turbulent flow, but also during the transitional and laminar flow regimes.

An electromagnetic flow meter bases its operation on the Faraday Principal, by which a conductor crossing a magnetic field generates a potential. The resultant potential is directly proportional to the flow velocity. The EL 2200 series flow meters utilize 304 stainless steel flow tube with carbon or stainless flanges, four Hastelloy C 22 electrodes are standard, with one electrode being used for ground to eliminate the need for costly grounding rings required by other manufactures. The standard liner materials are Ebonite or PTFE, with PTFE available as an option on 5" and larger meters. The flange and sensor exterior surface is coated with acrylic paint, providing excellent resistance to water.

Electronics available for the EL 2200 series consists of the versatile 608 transmitter that can either be AC, DC or battery powered. Electronics can be mounted directly on the flow meter or remotely mounted. Electronics can be mounted directly on the flow meter or remotely mounted. When the electronics are remotely mounted the entire flow meter meets IP68 suitable for permanent immersion in water up to a depth of 4 meters.

Features

- No moving parts
- Hastelloy C 22 electrodes standard
- Grounding electrode eliminates ground rings
- Sealed electrode and coil assembly provides immunity to humidity variation and IP68 protection
- Wide rangeability with a single unit
- No pressure drop
- Bidirectional capability

**Model EL 2200
Electromagnetic Flow Meter**

Specifications

Accuracy	±0.2% of reading plus zero stability
Zero stability	2 mm/s
Repeatability	±0.1%
Max Fluid Velocity	10 m/s
Tube Material	304 Stainless steel
Line Sizes	1" to 16"
Flange Material	Stainless steel or carbon steel
Electrode Material	Hastelloy C 22 (standard)
Liner Material	Ebonite or PTFE PTFE optional 5" and above
Max Temp Range	Dependent on liner material when electronics remotely mounted Ebonite: -40° to 176° F PTFE: -40° to 356° F Note: Please contact factory if temperatures above 284° F (140° C) are required.
Max Operating Pressure	Dependent on flange rating
Max Cable Length	100 meters
Min Conductivity	5 µS/cm, 20 µS/cm for DI water
Rating	IP68 up to a depth of 4 meters
CE Declaration	EN 61326:1997 to EN 61326/A3:2003
Straight Run	5D upstream and 3D downstream minimum
NSF Certification	Standard 61 Drinking Water System Components

Specifications (cont'd)

Flow Tube Material	Flange Material	Electrode Material
304 stainless steel (std)	Acrylic painted carbon steel (std)	Hastelloy C-22 (std)
	316 stainless steel	Titanium

Lining Material	Temperature Rating
Ebonite	-40° to 176° F, (-40° to 80° C)
PTFE	-40° to 356° F, (-40° to 180° C) ^{Note 1}

Note 1: PTFE standard operating temperature is -40 to 284 °F. Optional high temperature configuration is available for up to 356 °F.

Maximum cable length per liquid conductivity

Meter Flow Range

Meter Model	Meter I.D. (inch)	Minimum Flow Rate (GPM)	Maximum Flow Rate (GPM)
EL2200-025	1.00	1.38	69.21
EL2200-032	1.25	2.44	122.22
EL2200-040	1.50	3.48	173.76
EL2200-050	2.00	5.57	278.30
EL2200-065	2.50	9.92	496.23
EL2200-080	3.00	13.96	796.74

MC 608 Electronics

The MC 608A/B transmitter is our most versatile transmitter capable of displaying rate and total flows as well as providing multiple digital and analog outputs. The battery powered version, MC608B, provides 3 to 6 years of operation. The unit can be configured either directly using the 4 programming buttons on the front of the display, or using the Windows based programming software interfacing via MODBUS RTU on RS485. The new generation converter extends the use of electromagnetic flowmeters allowing better control of liquid flow at every point of installation.

- Available in powered version 12/24 VAC/DC or 90-264 VAC (MC608A)
- Available in battery powered version with a useful life of 3 to 6 years (MC608B)
- Compatible with all standard FTI Electromagnetic standard sensors
- Built-in data logger.
- Large graphics display with totalizer indications greater than 8mm
- Total management of power consumption with automatic sleep function
- Batteries can be replaced on site.
- MODBUS RTU interface for communication on RS 485.
- Submersible IP68 case available
- All configuration, totalizer and data logger values are stored even in case of power failure
- Multi-level password system to guarantee accessibility and confidentiality
